

**To: Whom It May Concern**

**From: Fred Sabins, President of CSI Technologies, LLC**

**Date: April 14, 2014**

**Subject: CSI Technologies Competing with Pumping Service Companies**

---

The intent of this letter is to clarify the market position of CSI Technologies, LLC. CSI Technologies is a wholly owned and independently operated subsidiary of Superior Energy Services. CSI's core businesses consist of engineering consulting, laboratory testing and on site field consulting. CSI Technologies does not and will never compete in the markets of pumping cement and stimulation treatments or in the commodity business of selling cement, cementing additives or cementing peripherals such as cement heads and swages. CSI is neither a pumping company nor a commodity based business. CSI is a technology development company which does not compete with pumping service companies in the industry.

While Superior Energy Services has several small pumping service companies in its portfolio, CSI has no affiliation with them. CSI does interact with these companies on a limited basis. They, like several other service companies, are clients to CSI. We strive to offer independent third party consulting and testing for any and all companies in the oil and gas industry.

CSI values its business relationship with operators and service companies alike and must maintain a strict confidentiality with all clients and those that work with our clients. We currently have active "Non-Disclosure/Confidentially" agreements with many of the service companies. We take these agreements very seriously and are acutely aware of the potential legal ramifications if these agreements were ever to be violated.

In summary, CSI Technologies does not operate in competition with pumping service companies.

CSI is a third party engineering firm and laboratory which is paid to develop and implement technologies in the oil and gas business. We work primarily with operators but have close working relationship with many pumping service companies and we maintain strict confidentiality with all information, materials and products that we come in contact with.

Sincerely,

Fred Sabins
